Summary

I design and implement complex systems, having a proven track record of developing and enhancing SaaS platforms with Python and JavaScript frameworks in Linux environments.

Work Experience

Full Stack Developer
getitAI, Inc.

Oct 2023 - Present
Remote, Contract

Developed and enhanced the knowledge base infrastructure for AI-driven sales agents, involving tasks such as refining database functionalities, improving search algorithms and optimizing storage connections.

Implemented a highly reusable component that enables pagination, full-text search, filtering, and sorting capabilities for dynamically updated tables, enhancing user experience and data accessibility.

Assisted in the onboarding process for new team members and participated in multiple code reviews.

Full Stack Developer
Signed NDA

July 2023 - Present
Remote, Contract

Played a key role in both designing and building vital API components, focusing on creating solutions that were both durable and capable of scaling effectively.

Led the complete redesign and implementation of a high-capacity system across multiple servers, optimizing for user-customizable request handling and efficiency.

Managed various DevOps tasks, including setting up CI/CD pipelines, load balancers, and databases, and performed maintenance on both bare-metal servers and VPSes, prioritizing security and high-availability.

Significantly improved API performance by overhauling its architecture, resulting in increased development speed, stability, scalability, and flexibility.

Developed and integrated a comprehensive credits system for the API, working with third-party subscription managers like Outseta.

Engaged in peer code reviews, providing constructive feedback to enhance code quality and team collaboration.

Projects

Personal AI SaaS Platform
Personal

A platform built with NextJS and Python that simplifies your life by merging everyday tasks with AI-driven analysis and suggestions.

DevOps Automations Tool
Personal

An automated tool for managing networks, servers, and services on a home network or small cloud through a Python API.

WSGI Web Framework
Personal

A backend framework written in Python for creating presentation websites, featuring a YAML CMS and a CSS framework akin to Tailwind CSS.

Education

Certifications

Backend Developer by Meta (9 courses)
Frontend Developer by Meta (9 courses)
IT Automation with Python by Google (6 courses)
Python for Everybody by University of Michigan (5 courses)
Machine Learning Specialization by IBM (1/6 courses)

Highschool

Colegiul Național „Mihai Viteazul” București
Mathematics and Informatics Profile
Graduated in 2022

Skills

Python
#uwsgi #asyncio #openai #unittest #httpx #lxml #black

I started coding in Python with the release of version 3.2 in 2011. My work spans scripting, gaming, web development, automation, and more recently, projects involving Large Language Models.

Linux

#debian #openssh #qemu #nftables #nfs #bind9 #isc-dhcp-server #dnsmasq #bash

Since getting my first computer, I've used Debian for everything from setting up servers and building networks to managing services and fixing system issues. I host my projects on VPSes that I manage myself.

Open Source

#pydantic #llms #automations #saas #tools

I've helped improve Pydantic and I'm looking to do more work on open-source projects. You can find all my personal projects available for anyone to see on my GitHub.

Backend

#fastapi #postgresql #redis #celery #dramatiq #supabase #sqlalchemy, pydantic

I work with ASGI REST APIs daily to support SaaS platforms. In 2020, I developed a framework on a uWSGI server to manage the backend of multiple presentation websites.

Frontend

#nextjs #react #typescript #javascript #tailwindcss #bootstrap #material #sass

I mainly work on backend development, but I'm also good at making user interfaces and connecting them to the backend. In 2020, I built a CSS framework from the ground up to give websites a look similar to what you get with Tailwind CSS.

DevOps

#railway #github-actions #bitbucket-pipelines #hetzner #haproxy #pgbouncer #git #docker #prometheus #grafana #sentry #supervisor

I can install and take care of Linux, web, and database servers, along with containers, making sure they handle traffic smoothly. I've also set up systems for continuous integration and delivery, as well as monitoring tools.
